

Homework Assignments: What to Submit for Grading

This document outlines (1) components of complete assignment submission; (2) details on formatting the R output for submission.

Components of assignments:

Component	For individual assignments	For group assignments	Notes (additional details below)
Outputted R notebook (HTML or PDF)	1 per person via Canvas	1 per group via Canvas	An annotated R notebook that shows your code, key output, and your interpretations. Please make sure that your analysis code is visible in the outputted notebook.
Raw code for the R notebook (.Rmd file)	1 per person via Canvas	1 per group via Canvas	Not for grading, but the assignment is incomplete without a raw code file.

Additional details on the R notebook and raw code file:

Submit an outputted notebook, which you can format as HTML or PDF. This will usually be at most 5 pages, often shorter, and should show your analytic process and results. Please make all the code relevant to the assignment questions visible in the final output.

Also, submit the raw code file used to generate your notebook output (the .Rmd file). This will allow me to refer to your code to see what might have gone wrong if I find something odd in your result. I might give feedback on the code file, but it will not affect your grade.
